HalvorAI

An alert is where the work starts.

Five steps from a flagged agent payment to a record your bank can check itself.

HalvorAI

STEP 1 OF 5

The alert says what happened, in words.

✕ Alert

agt_07 paid Example Market Data $0.01 forty times in 6 minutes at a steady interval. This looks like a retry loop.

Illustrative example.

A burst is one alert: later matching events join the same open record. No bare scores.

STEP 2 OF 5

Someone takes a position.

acknowledge	Someone is looking at it.
dismiss	Closed as not a problem.
escalate	Moved into a case.
reopen	Back to open.

Dismissal reasons come from a fixed list, so each detector gets a false-positive rate. Every action records who and when.

HalvorAI

STEP 3 OF 5

A case holds one incident.

What goes in

Alerts, events, agents and screenings that belong together.

Notes

Append-only. They can't be edited or deleted, so what the team knew and when stays intact.

Removals

You can take an item out of a case. The removal is logged.

HalvorAI

STEP 4 OF 5

The pack is what you hand over.

`summary.pdf`	human-readable summary
`manifest.json`	every file, with its SHA-256
`manifest.jws`	the signed manifest
`events.jsonl`	events as received, signed
`evidence/`	every evidence value
`results.json`	checks, alerts, actions
`chain.json`	chain positions and anchor
`timeline.csv`	one row per event and action

Plus an import file for a case tool.

HalvorAI

STEP 5 OF 5

The bank checks it offline.

```
npx @halvorai/ingest
verify-pack ./pck_01JA8R.zip
```

No upload and no HalvorAI account. The report covers:

- the manifest signature
- every file digest
- every event signature
- the hash chain and its anchors

WHO DECIDES

We prepare evidence. We don't file.

A pack supports your bank's own investigation and any report it decides to make. Only your bank can file.

Packs are stored with a seven-year retention lock that nobody, including us, can shorten. Sandbox packs carry a watermark, so they can't pass as production evidence.

HalvorAI

Who owns step 2 on your team?

See a full sample pack, built with synthetic data, at halvorai.com/sample.

We work after the payment and outside its path. HalvorAI is in developer preview.
